

# BREAST RADIOLOGIST POSITION

## \$400k per year

- FT or PT breast radiology position with NO “on call” duty, nights, or weekends!
- 6 weeks of paid vacation, 401k with employer match, plus profit sharing.
- Health Insurance, HSA and other benefits.
- Located in a beautiful, safe, medium-sized town with a low cost of living, nestled between the Daniel Boone National Forest and Lake Cumberland.

## Community Culture:

- Our clinics are located near town, yet we have minimal traffic, crime, or other hassles that you may find in urban areas. Somerset, with its unique combination of natural beauty, local events and small-town friendliness, is known as a place many people choose to retire. The schools in Somerset are ranked as some of the best in the state. You can learn more about our city, county and Lake Cumberland activities at these websites:

## About Kentucky Breast Care:

- Our company was founded in 2012 and has built a “continuity of care network” among imagers, clinicians, surgeons, radiation oncologists, plastic surgeons, genetics counselors, patient navigators and much more.
- KBC is independently owned (by Dr. Woodroof) and unbiased, so we can refer to the best professionals, rather than facility-specific professionals.
- All of our facilities are ACR Centers of Excellence and MQSA Certified.
- As indicated by our patients on [Facebook](#), our facilities are described as “spa-like”, yet we also have the latest technology in equipment (Tomosynthesis, Dedicated Breast Sonography, and Upright Affirm Stereotactic Biopsy, etc.).
- *In 2014, we also were one of the first two clinics in the USA to have Contrast-Enhanced Tomosynthesis, which has helped us find cancer earlier than ever possible.*
- At our clinic, we strive for excellent customer service and foster a “teamwork” approach amongst our staff (we call employees “team members”).
  - Visiting radiologists have complimented our team on their capabilities and techniques, *but we are always seeking improvement and feedback is golden.*
  - “Nurture” Culture: Because teams succeed or fail as one, we orient toward teaching, learning, empowering, and providing a safe environment for each person to ask questions, offer feedback and to learn.
  - We love what we do, and we want to make sure anyone working with our team has the right tools and the right environment to succeed. *This positive environment also makes for a more relaxing environment for our patients.*
- Company Website: <https://www.somersetfamilyimaging.com/>
- Take a look at our Facebook Page and read our reviews: <https://www.facebook.com/KentuckyBreastCare-417104821666967/?fref=ts>
- We are a stable, hard-working, collegial group who believes in a good work/life balance. Located on Lake Cumberland, Somerset is a beautiful place to live and/or to raise a family. The region offers a wealth of outdoor beauty and entertainment options.

## Benefits of Working with KBC:

- Being directly mentored by Dr. Andrea Woodroof, a fellowship-trained breast radiologist and the leader of our successful clinic. Dr. Woodroof has extensive hands-on experience with 3D mammography, contrast mammography and cryoablation.
- Our clinical team includes a patient care coordinator, dedicated breast sonographer, and breast radiologist assistant (who facilitates report creation and history taking/presentation).
- KBC has developed many best practices including:
  - History Gathering: our team is specially trained to gather pertinent data for each diagnostic case and follow up with patients to ensure each tracked finding is addressed (each symptom, each open BI-RADS 0, 3, 4, etc).
  - Real time visualization of mammogram or prior ultrasound exams while performing real-time sonography. Thus, our radiologists can compare prior BI-RADS 3 findings on prior ultrasound examinations while simultaneously obtaining current images, ensuring the correct plane orientation and patient position is reproduced.
  - Scribe/Dictation: Reports are made in real-time, and radiologists sign off as completed, which maximizes image reading time and minimizes report reading time.

## Requirements:

- M.D. or D.O. with American Board of Radiology Certification.
- Breast Radiologist with Fellowship training or equivalent work experience.
- Comfortable working in a fast paced, high volume setting.
